Professional Experience

11.16 – Current
Wolters Kluwer
Software Developer
Ludwigsburg, Baden-Wurttemburg

Wolters Kluwer is a global provider of professional information, software solutions, and services.

- Upgraded application to Angular 2+ using Reactive Forms, leveraging Kendo form components.
- Created dynamic and abstract components around the concept of a VM and Model dynamically generated by a Java backend. Backend developers used our components across 6 different applications serving Tax Consultants across Europe.
- Increased my team's efficiency by developing with Java on the backend to provide fixes, updates and new features that were required by the frontend.

03.12 - 06.16

Human Capital Management Institute
Full-Stack Web Developer
Marina Del Rey, CA

Human Capital Management Institute delivers advanced workforce intelligence and workforce analytics tools.

- Developed a user control module using plain vanilla JavaScript, jQuery and Highcharts that allowed a user to dynamically load data and assets in a data-heavy dashboard (https://github.com/pablooliva/spanel).
- Supported the development of the ASP.NET MVC backend, REST API and upgraded the authentication framework to Identity 2.0.
- Created custom WordPress websites and also marketed them using information architecture, content marketing and SEO.

09.08 - 01.14

City of Pasadena
Webmaster, Technology Project Manager
Pasadena, CA

The City of Pasadena is a suburb of Los Angeles, CA.

- Development and maintained the City's library website and online presence.
- Was part of the team that lead the upgrade of the City's website to a new ASP.NET-based CMS named Ektron.
- Increased user satisfaction by conducting user experience (UX) research with focus groups and individuals which improved the Library's website content architecture and user interface (UI).
- Expanded the reach of the Library's services to the community by introducing the use of social media, eBooks and digital content.

Projects and Portfolio

I like to create, to build, and to constantly improve. I enjoy using technology to do so.

https://ch.ckl.st - A professional checklist making application.

- I was interested in deepening my experience with Node.js, MongoDB and Angular Material.
- I wanted to share my experience and tips for finding a work as a software developer as an easily reusable checklist.
- Helped me expand my Docker knowledge and it was my first experience with setting up a CD pipeline; used Docker Hub and Digital Ocean.

https://b.luntly.com - An application for providing anonymous feedback.

- Originally developed with AngularJs, this app helped me expand my Angular 2+ experience as well as NoSQL concepts by having used Firebase.

https://pablooliva.de - Portfolio containing design and development samples and letters of recommendation.
